

Do you have COPD? Do you smoke? Are you interested in taking part in a study about quitting smoking and preventing relapse back to smoking?

We are inviting COPD patients who smoke to take part in a clinical trial that involves the very best smoking cessation medication available (**Champix®**). COPD is Chronic Obstructive Pulmonary Disease, sometimes known as bronchitis, emphysema or smoking-related lung disease.

We are looking to enrol people who:

- smoke cigarettes every day
- have a diagnosis of COPD
- live in the Auckland region
- are aged 18 years or older
- have access to a telephone (mobile and/or landline)
- are prepared to make a quit attempt with Champix®
- have tried, but failed, to quit smoking using other smoking cessation medicines
- have NOT used Champix® in the past 12 months

If you meet all of these criteria and are interested in the study, we'd love to hear from you.
